Species: Escherichia coli
Species: Bscherichia species: R.E.
Species: Bscherichia sequence of a gene cluster involved in entry of E colicins and single, Title: Nucleotide sequence of a gene cluster involved in entry of E colicins and single, Reference number: A91835; MUID:87222192; PMID:3294803
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  %;Cross-references: GB:M16489; NID:g148021; PIDN:AAA83918.1; PID:g1128977

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tothetical protein - Synechocystis sp. (strain PCC 6803)
Species: Synechocystis sp.
Variety: PCC 6803
Variety: PCC 6803
Date: 25-Apr-1997 #sequence_revision 25-Apr-1997 #text_change 20-Jun-2000
Accession: S76416
Accession: S76416

Title: Sequence analysis of the genome of the unicellular cyanobacterium Synechocystis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Status: preliminary
Molecule type: DNA
Residues: 1-136 <KAN>
Cross-references: EMBL:D90915, GB:AB001339; NID:g1653604; PIDN:BAA18545.1; PID:g165363
Note: the nucleotide sequence was submitted to the EMBL Data Library, June 1996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Species: Salmonella enterica subsp. enterica serovar Typhi
Note: this species has also been called Salmonella typhi
Note: this species has also been called Salmonella typhi
Accession: A00592

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Science 269:496-512(1995).
-1- FUNCTION: This protein is one of the 16S ribosomal RNA binding proteins (By similarity).
-1- SIMILARITY: Belongs to the S15P family of ribosomal proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-NOV-1995 (Rel. 32, Created)
01-NOV-1995 (Rel. 32, Last sequence update)
28-FRB-2003 (Rel. 41, Last annotation update)
305 ribosomal protein S15.
(RPSO-A OR RPSI5-A OR HI1328) AND (RPSO-B OR RPSI5-B OR HI1468)

If "The complete genome of hyperthermophile Methanopyrus kandleri AV19
If and monophyly of archaeal methanogens.";
Proc. Natl. Acad. Sci. U.S.A. 99:4644-4649(2002).
I proc. Natl. Acad. Sci. U.S.A. 99:4644-4649(2002).
I proc. Natl. Acad. Sci. U.S.A. 99:4644-4649(2002).
I composome, suggesting a role in chromatin architecture. However, it does not significantly compact DNA (By similarity).
I composome, suggesting a role in chromatin architecture. However, it does not significantly compact DNA (By similarity).
I composite the significantly compact DNA (By similarity).
I composite the DNA-binding affinity, thereby repressing transcription. Regulation of DNA-based activities is therefore achieved at the chromatin level (By similarity).

I SIMILARITY: Belongs to the archaeal histone-like Alba family.
                                                                                                                                                                                                                                                                                         10-OCT-2003 (Rel. 42, Last sequence update)

PARTICULAR HIGHLY BASIC HISTONES, WITH HI PROTEINS BEING CLEAVED
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DOMAIN: THIS PROTEIN CONSISTS OF AN IMMUNOGLOBULIN-LIKE SEVEN-
STRANDED ANTIPARALLEL BETA-HARREL DOMAIN LINKED TO A SUBDOMAIN
COMPOSED OF TWO BETTA-HAIREIN RIBBONS.
SIMILARITY: Belongs to the neocarzinostatin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

-!- FUNCYICN: Insulin decreases blood glucose concentration. It increases cell permeability to monosaccharides, amino acids and fatty acids. It accelerates glycolysis, the pentose phosphate cycle, and glycogen synthesis in liver.
-!- SUBUNIT: Heterodimer of a B chain and an A chain linked by two
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

--- CATALYTIC ACTIVITY: S-adenosyl-L-methionine = (5-deoxy-5-adenosyl) (3-aminopropyl) methylsulfonium salt + CO(2).
--- COFACTOR: Pyruvoyl group (By similarity).
--- SIMILARITY: Belongs to the prokaryotic AdoMetDC family. Subfamily

"An integrated analysis of the genome of the hyperthermophilic
archaeon Prococcus abyssis."
An integrated 47:1495-1512(2003).
-!- SIMILARITY: Belongs to the UPF0146 family.

I. FUNCTION: Riboflavin synthase is a bifunctional enzyme complex

acatalyzaing the formation of riboflavin from S-amino-6 (1-D)-

ribityl-amino-2 4 (1H.3H) *Pprimidinedione and L-3 4-dihydrohy-2-

butanone-4 phosphate via 6,7-dimethyl-8-lumazine. The beta subunit

catalyzes the condensation of S-amino-6 (1-D)-ribityl-amone-4-

phosphate via 6,7-dimethyl-8-lumazine (By similarity).

I. ATALYTIC ACTIVITY: 2 6,7-dimethyl-8-lumazine (By similarity).

ATALYTIC ACTIVITY: 2 6,7-dimethyl-8-lumazine (By similarity).

I. PATHWAY: Riboflavin biosynthesis; last step.

I. PATHWAY: Riboflavin biosynthesis; last step.

I. SIMILARITY: Belongs to the DMEL synthase family.

catalyzes the condensation of 5-amino-6-(1'-D)-ribityl-amino-5-(4(H)-4H)-pyrimidinedione with L-3,4-dihydrohy-2-butanone-4-phosphate yielding 6,7-dimethyl-8-lumazine (By similarity).
CATALYTIC ACTIVITY: 2 6,7-dimethyl-8-(1-D-ribityl)lumazine = Tiboflavin 4 - (1-D-ribityl)amino)-5-amino-2,6-dihydroxypyrimidine. PATHWAY: Riboflavin biosynthesis; last step.
SIMILARITY: Belongs to the DMRL synthase family.

erophilum.", Acad. Sci. U.S.A. 99:984-989(2002).

-1- FUNCTION: Riboflavin synthase is a bifunctional enzyme complex
catalyzing the formation of riboflavin from 5-amino-6-(1'-D)-
ribity1-amino-2, 4(1H,3H)-pyrimidinedione and L-3,4-dihydrohy-2-
butanone-4-phosphate via 6,7-dimethy1-8-lumazine. The beta subunit
catalyzes the condensation of 5-amino-6-(1'-D)-ribity1-
amino-2,4(1H,3H)-pyrimidinedione with L-3,4-dihydrohy-2-
butanone-4-phosphate yielding 6,7-dimethy1-8-lumazine (By

-1- CATALYTIC ACTIVITY: 2 6,7-dimethyl-8-(1-D-ribityl)lumazine = riboflavin + 4-(1-D-ribitylamino)-5-amino-2,6-dihydroxypyrimidine.
-1- PATHWAY: Riboflavin biosynthesis; last step.
-1- SIMILARITY: Belongs to the DML synthase family.
                                                             10-OCT-2003 (Rel. 42, Created)

similarity)
-!-CATALYTIC ACTIVITY: 2 6,7-dimethyl-8-(1-D-ribityl)lumazine =
riboflavin +4-(1-D-ribitylamino)-5-amino-2,6-dihydroxypyrimidine.
-!- PATHWAY: Riboflavin blosynthesis; last step.
-!- SIMILARITY: Belongs to the DWRL synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SECUENCE FROM N.A.

Natl., Acad. Sci. U.S.A. 100:8298-8303(2003).
-!- FUNCTION: This protein is essential for replication of the chromosome. It is also involved in DNA recombination and repair (By similarity).
-!- SIMILARITY: Contains 1 SSB domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE=22735913; PubMed=12835416;

Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch). compartment. Expressed in peripheral blood, spleen, and bone amarrow, at moderate levels in lung, small intestine and bone marrow, at moderate levels in lung, small intestine and testis, at a minimal levels in other tissues. Also found in vascular smooth muscle cells and hematopoietic malignancies.

-I INDUCTION: By photbol ester and inflammatory cytokines, such as TNF-alpha, or IL-1-beta, but not by growth factors.
-I-SIMILARITY: Contains 1 Bcl-2 homology 1 (BH1) domain.
-I-SIMILARITY: Contains 1 Bcl-2 homology 2 (BH2) domain. Gaps ö 95.0%; Score 19; DB 1; Length 175; 100.0%; Pred. The complete genome sequence of Haemophilus ducreyi.",

Submitted (JUN-2013) to the EMBL/Genbank/DBJ databases.

I. Submitted (JUN-2013) to the EMBL/Genbank/DBJ databases.

C. - FUNCTION: Catalyzes a salvage reaction resulting in the formation

of AMP, that is energically less costly than de novo synthesis.

C. - CATALYTIC ACTIVITY: AMP + diphosphate = adenine + 5-phospho-alpha-

D-ribose 1-diphosphate.

C. - SUBNUIT: Homodimer (By similarity).

- SUBGELUTAR LOCATION: Cytoplasmic.

- SUBCELUTAR LOCATION: Cytoplasmic.

- SUMILARITY: Belongs to the purine/pyrimidine

phosphoribosyltransferase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TIGREAMS; TIGRO1080; apt; 1.

15-MAR-2004 (Rel. 43, Last annotation update)
Ubiquinol-cytochrome C reductase iron-sulfur subunit (EC 1.10.2.2)
(Rieske iron-sulfur protein) (RISP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     respiratory chain that generates an electrochemical potential coupled to ATP synthesis. CATALYTIC ACTIVITY: QH(2) + 2 ferricytochrome c = Q + 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -1- SUBUNIT: The main subunits of complex b-c1 are: cytochrome b, cytochrome c1 and the Rieske protein.
-1- SUBCELLULAR LOCATION: Membrane-bound.
-1- MISCELLANEOUS: The Rieske protein is a high potential 2Fe-2S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ferrocytochrome c. -!- COFACTOR: Binds 1 2Fe-2S iron sulfur cluster per subunit (By
